- Netflix / Vudu / Pandora / YouTube Streaming
- Divx HD / AVCHD / MP3 / JPEG File Playback
- Network DLNA File Connection w next firmware upgrade
- AQUOS Link / AQUOS Pure Mode for Optimize Picture
- Auto Software Update

3D Network Blu-ray Disc Player with  
WiFi Connectivity and an Ultra Slim Profile 2 7/8"

The BD-HP80U Network 3D Blu-ray Player is perfect for enjoying Full HD 1080p Blu ray video and wireless streaming entertainment. The BD-HP80U also is the definitive companion for your 3D TV, this slim line 3D Blu ray player allows a user to play most content in their library, Blu ray 3D, DVD, CD discs and JPEG images, MP3 audio files from disc, USB or streaming from your network via DLNA.

All the features you've come to expect from a top line Blu-ray player, but now enjoy it in 3D.

## Features

**Blu ray 3D Playback** – Immerse your entrainment experience in 3D and make your content come alive with 3D technology! The astounding effects will immediately grab your attention and bring your entertainment experience to the next level.

**HDMI® Output** – Simple One Cable Connection - A one cable connection carries complete digital audio and video content between your HDTV and the BD-HP90U player for the best high-definition 3D video and highest fidelity audio in home theater today

**Full HD 3D Resolution** – An Amazing Home Theater Experience Enjoyed in the Comfort of Your Home - The Blu-ray Disc™ 3D format has full 1080p resolution capability – that's the maximum picture resolution available today. 1080p = 1,080 lines of vertical resolution, progressively scanned.

**High Fidelity Audio** – Real Life-Like Sound - Blu-ray Disc™ technology lets you take advantage of the latest surround sound formats such as Dolby® TrueHD. This means you will enjoy high quality lossless 7.1 Channel digital surround that is bit-for-bit the equivalent of the master recording.

**HDMI® Up-scaling** – Backwards Compatible - Even your existing standard definition DVD library can look better than ever because Blu-ray Disc™ players are backwards compatible with your DVDs. By optimizing standard DVD playback signals to 1080p (when displaying on a 1080p capable HDTV through the HDMI® connection), the BD-HP80U can deliver more picture and sound quality.

**Wi-Fi Network Connection** - The built in wi-fi allows a connection to your wireless router. This provides access to BD Live bonus content as well as Netflix, Vudu streaming and YouTube viewing, while helping to eliminate the cable clutter that often interferes with your entertainment area.

**DLNA Network Connection** – The DLNA Digital Living Network Alliance defines a standard for moving movies, photos, music and other media from a network to a Blu ray player. DLNA servers can store media in one location and can stream the media to DLNA compliant player Connection with firmware upgrade.

**Divx HD / JPEG / MP3 File Playback** - View both still and video digital images recorded in HD onto a CD-RW/R, USB drive or from your network in a slideshow format and play back MP3 audio files in addition to Divx HD file format.

**AQUOS PURE MODE** - provides seamless optimization of Blu-ray Disc™ content. When the Sharp BD-HP90U is connected to an AQUOS TV through an HDMI® cable, the AQUOS TV will automatically switch to "dot by dot" mode to deliver full 1080 video content. The BD-HP90U/AQUOS TV combination provides the most optimized Blu-ray resolution and best possible picture.

**AQUOS LINK™ Function** - Seamless Operation among Sharp Audio/Video Products with One Remote

Control – Why use two remotes when you can use one? The AQUOS LINK™ function allows you to control both your AQUOS LCD TV and your AQUOS Blu-ray Disc™ player together. When you connect your AQUOS LCD TV to the Blu-ray Disc™ player via an HDMI® connection, you will have seamless interoperability between your AQUOS LCD TV and the BD-HP80U. AQUOS LINK™ also features the ability to control on-screen with other manufacturers remotes.

**BD Live** - provides consumers access to a wide variety of real-time content via a network connection, such as movie scene extras, new previews, games, chat and more. The Bonus View function provides access to picture-in-picture special features, allowing you to simultaneously watch your favorite movie scenes and added bonus features (on compatible disc).
